

## Research Documents with New Comments 5

### Introductory Note

This series is an effort to present the updated research documents with information collected through recent Ethnobotanical surveys (December 2010 onwards).

### **Traditional medicinal knowledge about common herbs in Chhattisgarh, India: Recent interactions with the herb vendors of Gandai-Salewara region.**

**Pankaj Oudhia**

<http://www.pankajoudhia.com/RA4.pdf>

Through the recent interactions with the herb vendors of Gandai-Salewara region. I have collected valuable information on traditional medicinal uses of common herbs. The herb vendors this region move inside the Chhattisgarh. I am giving the details in present article.

To nullify the harmful effect of Bhang (*Cannabis sativa*) the herb vendors use the combination of Sonth (Dried Ginger) and Dahi (Curd). The combination is taken internally. To nullify the harmful effects of Gunja (*Abrus precatorius*) fruits inside the body, the herb vendors use whole herb juice of Jangli Chaulai (*Amaranthus spinosus*). The juice is taken internally with sugar. The use is continued till complete cure. Both uses are very popular among them. The herb vendors claimed that they have gained this knowledge from wild animals specially from monkeys who accidentally feed on attractive Gunja seeds. The traditional healers of Gandai-Salewara region informed that the whole herb juice of cultivated species of Chaulai (*Amaranthus viridis*) can also be used but it is less effective as compared to Jangli Chaulai. The herb vendors of this region are aware of promising herbal combination that is used in treatment of Acidity. In this combination, Giloi (*Tinospora cordifolia*), Chita (*Plumbago* sp.), Kadu Parval (*Trichosanthes cucumerina*) and Kali Mirch (*Piper nigrum*) are used. All ingredients except Kali Mirch are added in equal proportion. Kali Mirch is taken in one fourth quantity. All herbs and herb parts are dried and converted into powder. This powder is boiled in water. When half quantity (of initial quantity) of water remains, the boiling is stopped and decoction is taken internally as treatment. It is considered as one of the promising treatments. Every time the herb vendors use the freshly prepared decoction.

In treatment of Syphilis, the herb vendors are aware of use of Fudhar stem. Fudhar is well known herb in this part of Chhattisgarh. Its scientific name is *Calotropis gigantea*. The herb vendors

collect the stem and after burning collect the ash. The ash is taken internally with sugar as treatment. I have found this ash with many herb vendors. Without disclosing the information about this ash, they sell it to the patients as sure cure of Syphilis. They claimed that at initial stages this ash can cure the patients within a week.

#### **New Comments added on December 10, 2010**

Through recent Ethnobotanical surveys in seven states I have collected information about over 300 Traditional Formulations for Syphilis in which *Calotropis gigantea* and *Calotropis procera* are used as main ingredients. All parts of *Calotropis* are used but the use of roots is popular among the Healers. The Healers of different regions have different criteria for selection of plants for roots. Most of them practice Traditional Allelopathic Knowledge to enrich *Calotropis* plants parts with desired medicinal properties. Grasses and annual dicot weeds growing in surroundings are used in form of Herbal Solutions. *Calotropis* plants are treated with these solutions up to long time.

---

In treatment of Ascites the herb vendors use Thura (*Euphorbia neriifolia*) based herbal combination. They mix the Doodh (Latex) of Thura with the fruit pulp of Karonda (*Carissa carandas*), Pipal (*Ficus religiosa*) bark and Sulphur (Gandhak) and keep the combination upto seven days. Every day it is mixed thoroughly. After one week, the combination is used in very little doses in treatment of Ascites. The herb vendors prefer to take systematic treatment under the supervision of traditional healers. The traditional healers of this region informed that they add Neela Thotha (Copper sulphate) also in this combination. According to them, a slight difference in dose can result in death of the patients. This is the reason this combination is used in specific cases only when all herbs and herbal combinations fail.

In treatment of fever, the herb vendors of Gandai-Salewara region use the herbal combination having Tulsi (*Ocimum sanctum*) leaves, Bambri (*Acacia nilotica*) leaves and Ajwain (*Carum copticum*). All ingredients are mixed in equal proportion and the mixture is boiled in water to prepare the decoction. This decoction is taken internally thrice a day as treatment. Every time fresh decoction is prepared.

#### **New comments added on May 3, 2007**

When I discussed use of this decoction in treatment of fever the Traditional Healers informed that more specifically this decoction is useful in treatment of Malarial fever. I have mentioned in

previous research articles that in Malaria prone areas the Healers suggest the natives to take decoction prepared from *Andrographis paniculata* leaves regularly as it acts as preventive. This decoction was an integral part of Bengali community in West Bengal in early days. The Healers disclosed that this Tulsi based decoction can be used as preventive to Malaria. The Healers of different regions suggested different herbs for addition in this decoction in order to increase its performance. The senior Healers of Mahasamund region informed that in general such decoction regularizes the functions of body parts and increases natural resistance. It is wrong to say it as preventive to Malaria only as when body is having good resistance power then it is capable to prevent many types of infections. I am with them and with this explanation. The information collected from the Healers of different regions is given below in form of Herbal Formulations. The herbs added in these formulations are mainly for increasing the efficacy of basic three herbs in this decoction.

For information on useful parts and collection norms for these medicinal herbs, other than three basic herbs, please see this interactive table.

**Useful parts and collection norms for medicinal herbs added in *Ocimum sanctum*, *Acacia nilotica* and *Trachyspermum copticum* based Traditional Herbal Formulations used by Traditional Healers of Indian state Chhattisgarh as preventive to Malaria.**

Herbal Formulations	Used Parts	Collection Norms
Herbal Formulation No.1	Leaves	New leaves of old trees growing near water source are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.2	Flowers	Plants growing in wasteland specially Lateritic <a href="#">wasteland</a> are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.3	Flowers	Old trees are preferred. Plants growing far from human population are preferred. In Chhattisgarh trees found in <a href="#">Kawardha</a> region are considered specially rich in medicinal properties.
Herbal Formulation No.4	Leaves	Wild types growing with less or no care are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.5	Flowers	Diseased plants are avoided. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.6	Leaves	Plants growing with <a href="#">Ipomoea reniformis</a> and <a href="#">Cyperus rotundus</a> are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.7	Leaves	Plants collected from organically grown rabi crops are selected. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.8	Leaves	Plants growing with traditional and medicinal rice varieties are preferred. <a href="#">Allelopathic</a> treatments are done before collection.

Herbal Formulations	Used Parts	Collection Norms
Herbal Formulation No.9	Leaves	Leaves are collected before flowering. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.10	Flowers	Fallen flowers are preferred. Young trees are selected. Trees at Mad stage are not preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.11	Flowers	Plants collected from <a href="#">Sal</a> forest are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.12	Flowers	Plants growing with <a href="#">Pueraria tuberosa</a> population are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.13	Tubers	Red type is preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.14	Flowers	Old trees are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.15	Flowers	Plants growing with <a href="#">Tridax procumbens</a> , <a href="#">Blumea lacera</a> , <a href="#">Cynodon dactylon</a> , <a href="#">Psoralea corylifolia</a> , <a href="#">Cleome viscosa</a> and <a href="#">Cucumis trigonus</a> are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.16	Flowers	Plants growing in stress are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.17	Leaves	Plants collected from places near to forest are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.18	Leaves	New red leaves are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.19	Leaves	New disease free leaves are preferred.
Herbal Formulation No.20	Flowers	Disease free plants are preferred. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation No.21	Roots	New roots are preferred. Digging is done with the help of wooden tools. Dark nights are preferred for collection of roots. <a href="#">Allelopathic</a> treatments are done before collection.
Herbal Formulation	Fruits	Plants growing in open forest are not preferred. <a href="#">Allelopathic</a> treatments are done before collection.

Herbal Formulations	Used Parts	Collection Norms
No.22		

All these herbs are added in half quantity of basic herbs. Many of these formulations are used in treatment of Malaria. Most of the herbs used in these formulations grow in surroundings. This is the reason the Healers face no problem in its collection. Many herbs are seasonal. Many Healers use it in off-season whereas other believes that as they are having much choices they can use other formulations having freshly harvested herbs. Common natives are less aware of these formulations. The Healers give them combination of herbs preferably in form of mixture, so that users can not know the ingredients. Most of the natives I interacted with, showed no interest in getting information on ingredients. They have deep faith in Healers and they want to use these herbs under their supervision.

---

In treatment of constipation, the herb vendors are aware of use of Tulsi leaf juice in combination with Paan (Piper betle) leaf juice. Both juices are mixed in equal proportion and lukewarm juice is taken internally at night before going for sleep. Its regular use roots out the problem of constipation.

### **New comments added on May 2, 2007**

When I discussed this combination with the Traditional Healers of different parts of Chhattisgarh through recent surveys they confirmed its efficacy but according to them it is home remedy for constipation and useful for initial stages. At advanced stages they suggested use of strong herbal formulations in which these herb parts are used as main ingredients. The Healers of different regions suggested different formulations. I have compiled these formulations and giving details in next section of this article. As you know many types of Paan leaves are available in the state. The Healers prefer leaves of Bangla Paan for this purpose. For this Paan the Healers have to depend on the local Paan shop owners. Through them they get poor quality leaves and as result desired effects are not achieved. The Healers are having specific collection norms. Many Healers grow it in their Badi but as constipation is very common trouble Badi plants are not enough to give leaves enough for bulk preparation.

They prefer young leaves of Tulsi in this formulation. Tulsi growing through excessive watering is not preferred. Also diseased leaves are not used. Many Healers prefer Tulsi in stress as source of medicinally rich leaves but Tulsi collected during hot summer is not used. The Healers of

Bastar region informed that in nature many types of weeds grow with Tulsi plants. Oxalis corniculata, Cassia tora (Now Senna tora), Cynodon dactylon and Blumea lacera are among these weeds. They believe that Tulsi collected from place having these weed species are rich in medicinal properties. Although its extracts are not used by the Healers to enrich Tulsi plants in absence of such places but I feel that through Allelopathic treatment with these weeds we can enrich it with medicinal properties. For this detailed studies are required specially to standardize the doses. The Healers pointed very valid point when I discussed with them about it. They said that these plants grow with Tulsi in their surroundings. That is why its use must not be universal law. The Healers of other regions have to go to such places to list the plants growing naturally with Tulsi. As flora changes place to place, must caution is required while practicing science of Allelopathy for herb enrichment.

The Healers of Chhattisgarh Plains informed that in this formulation many times use of Paan juice results in harmful effects on patients having sensitive stomach linings. Combination of Tulsi and Paan juice aggravates the trouble. This is the reason they suggest use of both herbs in dry form along with other herbs having property to increase performance of both herbs and also to nullify harmful effects of it.

---

The herb vendors sell the bark of Jaljamini (*Cochlospermum religiosum*) as a remedy to Diabetes. They informed me that the bark is used in combination with Kali Mirch as treatment. Its long term use gives good results. This was new information for me.

### **New Comments added on December 10, 2010**

Through recent Ethnobotanical surveys I collected interesting information on *Cochlospermum* based Traditional Formulations used in treatment of Diabetes. I have already presented it through this document. Please visit

<http://www.pankajoudhia.com/set75.pdf>

Many of the above mentioned traditional uses are unique. The comments of the traditional healers on these uses clearly indicate that the knowledge of herb vendors is valuable.

Thank you very much for reading the article.
